COMPANY PROFILE

公司简介

焦作盛世达轻合金技术有限公司是一家专业从事变形镁合金半连续挤压及产品挤压和阴极保护防腐材料的研发、生产、销售、工程技术服务为一体的综合实业公司，是中国港口最大的牺牲阳极供应商，是中交天津港湾研究院、北京有色金属研究院及中交一航、四航局的战略合作伙伴，系中国工业防腐蚀技术协会、学会、中国石油工程协学、中国镁业协会直属会员单位。

盛世达公司现有员工300余人，其中高、中级技术人员140余人，高级工程师10人，公司占地面积45000平方米，主要生产：镁合金牺牲阳极、铝合金牺牲阳极、锌合金牺牲阳极、镁带、锌带、半连续镁合金棒材、恒电位仪、高贵铸铁阳极、深井阳极、预包装铸铁阳极，贵金属氧化物阳极，MMO阳极、测试桩、参比电极等，数十个系列近百种产品。拥有国内先进的实验室和化验室，具有优良的设备和精密检测仪器。公司已通过ISO9001、ISO14001、GB/T28001(OHSAS18001)质量体系认证，并在2006年取得自营进出口权。公司拥有年产铝、锌、镁牺牲阳极10000吨，高硅铸铁阳极5000吨、镁合金棒5000吨的生产线，盛世达公

Jiaozuo ShengShida Light Alloy Technology Co.,Ltd. is a comprehensive industrial company that is engaged in the R&D, production, sales and engineering and technical services of magnesium alloy semi continuous casting and extrusion products and cathodic protection of anti-corrosion materials, it is the one of most powerful sacrificial anode suppliers of China's port, it is the strategic partner of Tianjin Harbor Research Institute, Beijing Research Institute of Nonferrous Metals and No.1 Civil Aviation Bureau, No.4 Civil Aviation Bureau, and it is the member unit of China Industrial Anticorrosion Technology Protection Association, Institute, China Petroleum Engineering Association, China Magnesium Industry Association.

There are more than 300 employees in the company, including high, intermediate technical personnels of 140 people, senior engineers of 10 people, who have rich experiences and innovation,to provide you with a full range of technical support and good after-sale servive the company covers an area of 45,000 square meters, it mainly produces dozens of nearly a hundred kinds of products magnesium alloy sacrificial anode, aluminum alloy sacrificial anode, zinc alloy sacrificial anode, magnesium, zinc ribbon, semi continuous

司有二十年的牺牲阳极研发成果和生产业绩，为推动防腐事业的发展和创新不断努力，特别是牺牲阳极和镁合金棒生产技术处于国内领先地位。盛世达干吨国标阴极保护产品供应国内外，取得了显著的经济效益和社会效益。

公司自成立以来，先后与天津一航、四航公司合作参与并生产牺牲阳极：曹妃甸首钢矿石码头（1-3期）牺牲阳极阴极保护工程、港珠澳大桥CB03标段阴极保护工程、湛江港保满集装箱码

magnesium alloy bar, a potentiostat, casting iron anode, deep well anode, pre packaged cast iron anode, precious metal oxide anode, MMO anode, testing pile, reference electrode. It has advanced laboratories, excellent equipments and precision testing instruments. The company has passed ISO9001, ISO14001, GB/T28001 (OHSAS18001) quality system certification, and in 2006 it obtained the right to import and export. The company has the production line with an annual output of aluminum, zinc, magnesium sacrificial anode of 10,000 tons, 5,000 tons of high silicon cast iron anode, 5,000 tons of magnesium alloy rod, it has twenty years of R&D and production performance of sacrificial anode, we are making continuous efforts to promote the development and innovation of anticorrosive undertakings. Especially its production technology of the sacrificial anode, magnesium alloy rod is in the domestic leading position. The products of kiloton GB cathodic protection are sold in domestic and aboard, and gained remarkable economic benefits and social

头一期钢管桩阴极保护工程等国家大中型防腐工程，取得了良好的经济效益和社会效益，为国家防腐蚀事业贡献力量。

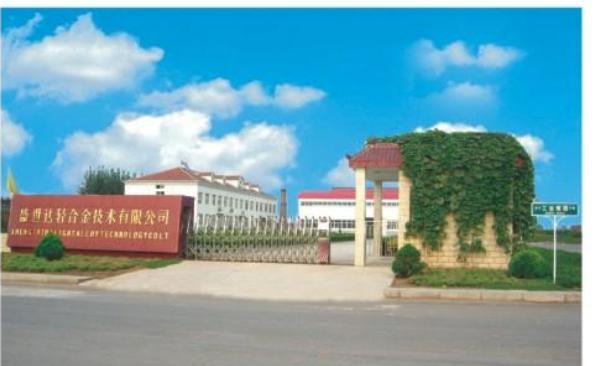

公司遵循“灵活、创新”的经营理念，“诚信、协作、高效、奋进”是盛世达倡导的企业精神。盛世达公司拥有现代化的管理理念，优良的产品，一流的服务，盛世达公司总经理张峻萍竭诚与国内外各界人士真诚合作共创双赢。

benefits.

Since the establishment, the company has cooperated with Tianjin No. 1 AVIC, No. 4 Aviation Corporation to produce sacrificial anode: we have completed Shougang Caofeidian ore terminal (section 1-3) sacrificial anode cathodic protection engineering, the cathodic protection engineering of the Hong Kong-Zhuhai-Macao Bridge CB03 section, the cathodic protection engineering of Zhanjiang GangBaoman Container Terminal section 1 and other large and medium-sized anti-corrosion engineerings, and achieved good economic and social benefits, we have made contribution to anticorrosion cause for the country. The company follows the business philosophy of "flexible, innovative", the spirit of "honesty, cooperation, efficient, progressive" is advocated by the enterprise. Sheng Shida company has modern management idea, excellent products, excellent service. General manager of Sheng Shida, Zhang Junping will wholeheartedly cooperate with the domestic and foreign friends from all walks of life to create a win-win situation.

THE GENERAL MANAGER SAYINGS 总经理语录

- ◆ 没有二等品、要做就要做一等品
- ◆ 纸扎的花骗不了蜜蜂
- ◆ 诚实做人、认真做事
- ◆ 做产品、就是做产品
- ◆ 企业的生命在于产品，产品的生命在于质量
- ◆ 人无我有，人有我优，人优我新
- ◆ 积极的人像太阳，照到哪里，哪里亮；
消极的人像月亮，初一、十五不一样。
- ◆ 我们都是太阳，都是盛世阳光，我们是盛世达人！
我们做产品必须实实在在，要经得起历史的、
时间的考验，要经得起市场的检验。

SEASTAR FIVE CORE STRENGTHS

盛世达五大核心优势

让您买的放心，用的安心

we will win our customer's full trust in our products

强大的研发团队，为客户打造非标产品
一流的专业技术人才和先进的现代化生产设备
规范的管理和专业的生产技术
为需求不同的客户打造合适的非标产品

根据您的要求，为你提供最合适的产品和解决方案
盛世达资深的工程师与您沟通，详细了解您的需求，共同探讨方案可行性；
免费提供最合适您的工程方案、给您提供最满意的产品；
盛世达在港口、煤气管道、电力工程方面，产品服务质量一致得到客户好评。

质量管理体系认证企业，产品性能和质量值得信赖
通过ISO9001质量管理体系认证企业
全面贯彻质量管理体系要求，生产环节严把质量关
在产品的研发、设计、制造、质量控制及服务协调方面，
始终保持高效运作！

完善的售后服务体系，一站式服务，
保证产品质量和服务质量
强大的生产配套能力，以完善的服务体系，
为客户提供保姆式的售后服务；
技术难题2小时内电话回复，河南省24小时现场服务，
外省48小时现场服务的快速响应
盛世达为您免费提供技术培训，解决您的后顾之忧

盛世达自产自销，减少中间环节，服务一站到工程现场，
最大让利给客户，真正的让您省钱，关键是让您合作放心！让您干工程交朋友！

We have strong R & D team to create non-standard products for customers
The first-class professional and technical personnel and advanced modern production equipments
Standardized management and professional production technology
We will build suitable non-standard products for the customers with different needs.

It is the quality management system certification enterprise, the product performance and quality is trustworthy.
It has passed through the ISO9001 quality management system certification.
We fully implement the quality management system requirements and strictly control the quality in the production process.
In the aspects of product development, design, manufacturing, quality control and service coordination, we always keep high efficiency operation!

Perfect after sale service system, one-stop service, To ensure the quality of product and service quality
On the basis of strong production matching capacity, perfect service system, We provide nanny after sale service to customers;
Technical problems within 2 hours of call back, Henan province 24 hours on-site service, 48 hours outside field rapid response services
Sheng Shida will provide free technical training for you to solve your any menace from the "rear".

Basing on marketing one's own products, Sheng Shida company will reduce intermediate links and supply service to the construction site.
We will give the maximum profit to customers, make you money, let you rest assured!

We will provide the most suitable products and solutions for you according to your request.
The senior engineers of Sheng Shida will communicate with you, understand your needs, and discuss the feasibility of the scheme; We will provide the most suitable project for free, and provide you with the most satisfactory products;
In the port, gas pipelines, power engineering, our products quality and services have been praised by the customers.

Factory direct sales, product improvement, price concessions
We can provide customers with the most preferential prices, the highest cost-effective products by the means of factory direct sales;
Standardized management and professional production technology;
We reduce intermediate links, give the maximum profit to customers by the means of market one's own products.

Deformation of semicontinuous
casting of magnesium alloy And extrusion series
变形镁合金半连续铸造及挤压系列

变形镁合金半连续镁合金棒材、板坯料

Magnesium alloy semicontinuous magnesium alloy rod, slab

产品说明：
Product description:

我公司按照ASTM B 93/B 93M生产的变形镁合金半连续镁合金铸棒和方坯，具有精度高，内部无夹杂、无空洞缺陷、成份控制严格等优点，镁合金具有良好的铸造、挤压、切削、焊接以及弯曲加工等性能，被用在交通领域（汽车、摩托车、自行车、高速轨道列车）电子产品领域（电脑、手机、数码相机等）医疗器械领域（轮椅、拐杖、康复健身器材等）以及纺织、印刷机械等领域。

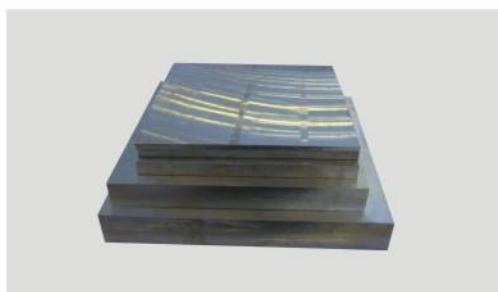

本公司专为变形镁合金提供高精度优质半连续铸造圆坯。

The magnesium alloy semicontinuous magnesium alloy casting bar and billet that are produced by our company in accordance with ASTM B 93/B 93M have the advantages of high precision, no internal inclusions, no voids, components with strict control etc., Magnesium alloy has good properties of casting, extrusion, cutting, welding and bending, that is used in the field of transportation (automobile, motorcycle, bicycle, high-speed train), Electronics (computer, mobile phone, digital camera, etc.), the field of medical apparatus and instruments (wheelchair, crutch, rehabilitation fitness equipments) and textile, printing machinery and other fields.

The company specifically for magnesium alloy with high precision quality semicontinuous casting round billet.

用途：
USES:

- 1.挤压型材、管材、棒材的圆坯 1. Round billet of extrusion profiles, pipe, bar
- 2.锻造各种锻件的圆坯 2. The round billet that is forged into all kinds of forgings

热水器镁阳极 water heater anode

产品说明：
Product description:

我公司按照GB/T17731-2009、ASTM B 843-1995生产的热水器镁阳极主要用于热水器、换热器、蒸发器、锅炉等设备，有软化水质、排垢除污、延长主机使用寿命等特点。镁合金热水器牺牲阳极，产品分浇铸(AZ63)和挤压(AZ31)两大类，广泛应用于热水器以及锅炉的防腐。

The magnesium alloy sacrificial anode produced by our company according to national standard GB/T17731-2009 "magnesium alloy sacrificial anode" (hereinafter referred to as: magnesium anode) is suitable for the oil, gas, water supply for the anticorrosion protection of underground and fresh water and drainage pipeline, underground cables, chemical industry, communication, harbor, ships, reservoir gate project.

产品介绍

Product introduction

我公司根据GB/T 4948-2002, U.S.Mil-A-18001K、W标准生产的系列阳极，适用于海水介质中的船舶、机械设备、压载水舱、储罐内壁、滨海设施、海底管道、码头钢桩、海洋平台、电缆等设施金属防腐蚀的阴极保护。

The series of anode produced by our company according to GB/T 4948-2002, U.S.Mil-A-18001K, W standards is suitable for cathodic protection of ships, machineries and equipments, water ballast tank, storage tank, coastal facilities, pipeline, steel pier pile, offshore platform, cables and other facilities for metal anticorrosion in seawater.

阴极保护牺牲阳极系列

锌合金牺牲阳极系列

Zinc alloy sacrificial anode series

产品介绍 Product introduction

我公司按照GB/T4950-2002标准生产的锌-铝-镉合金牺牲阳极，适用于海水、淡海水介质中的船舶、机械设备、海洋工程和海港设施以及低电阻率土壤中的管道、电缆等设施金属防腐蚀的阴极保护。

The Zn-Al-Cd alloy sacrificial anode produced by our company in accordance with GB/T4950-2002 standards is suitable for metal anticorrosion protection of shipbuilding, machinery and equipment, marine engineering and port facilities in sea water, desalination of seawater medium and pipelines, cables in the low resistivity soil and other facilities.

该产品具有以下特点

- 1.阳极自溶性小,电流效率高,阳极发生电流的自调节性能好。
- 2.保护年限较长,可达20-30年,一般不会发生“过保护”现象。

锌合金牺牲阳极

镁带牺牲阳极

Magnesium sacrificial anode

产品介绍
Product introduction

我公司的镁带阳极使用优质高纯镁生产，符合 ASTM B 843-1995 SY/T0019-1997 标准，采用特定的工艺挤压而成，阳极具有极好的电化学性能，带状阳极的形状扁平，长度可以调节，容易弯曲。本产品用于高电阻率环境，套管内管道的保护，管道临时阴极保护、储罐及管网的保护、防强电干扰的接地栅。

Our company's magnesium anode is made of high purity magnesium according to ASTM B 843-1995 SY/T0019-1997 standard, It is extruded with specific technology, the anode have excellent electrochemical performance, ribbon anode has flat shape, the length is adjustable, it is easy to be bent.The product is used for the high resistivity environment, the protection of casing pipe, the pipeline temporary cathodic protection, storage tank and pipeline protection, anti strong electrical interference grounding grid.

高硅铸铁阳极

产品介绍

我公司的(含铬)高硅铸铁阳极严格按照ASTM A518 BS1591标准和GB8491-87《高硅耐蚀铸件》生产制造的。高硅铸铁阳极管是采用离心工艺铸造而成，壁厚均匀、耐压，在管中央进行电缆连接。高硅铸铁实心棒状阳极是采用传统沙模铸造的，接线电缆联于阳极一端。本产品被广泛应用于海上钻井平台、地下钢管管道、采油联合站、地下电缆、地下储罐等设施的外加电流的阴极保护中。

预包装(含铬)高硅铸铁阳极

Pre-packaged (chromium) high silicon cast iron anodes

产品介绍

Product introduction

我公司生产的预包装高硅铸铁阳极。主要由(含铬)高硅铸铁阳极、焦炭填料、导气管和钢套管等组成，然后用支架将高硅铸铁阳极体固定在钢套管的中心，装上导气管后在其四周填充焦炭填料，将原来在施工现场进行的操作在工厂里完成，简化了施工程序，提高工作效率。

预包装高硅铸铁阳极

贵金属氧化物深井阳极体

Noble metal oxide anode body

产品介绍

Product introduction

我公司生产的预包装贵金属深井阳极是由贵金属管状阳极串、导气管、焦炭填料和钢质套管组成，将阳极串固定在钢质套管中心，装上导气管后阳极串四周填充焦炭填料。其具有使用寿命长、安装方便、接地电阻小等优点。深井阳极根据要求可采用贵金属氧化物阳极、优质高硅铸铁阳极。

Pre packaged noble metal anode produced by our company is composed of a noble metal tubular anode, airway tube, coke packing and steel casing, the anode is fixed on the steel casing center, after the airway is installed the coke filler is filled around the anode. It has the advantages of long service life, convenient installation, low grounding resistance, etc.. Deep well anode can be made of the noble metal oxide anode, high silicon cast iron anode according to requirements.

外加电流阴极保护系列产品-钛基贵金属氧化物阳极

Impressed current cathodic protection series products

贵金属氧化物网状阳极 Precious metal oxide anodes

产品介绍 Product introduction

我公司生产的贵金属氧化物网状阳极主要用于桥梁、钢筋混凝土等滨海设施的阴极保护，通过低压直流电流向被保护的钢筋结构提供保护电流，从而抑制钢筋腐蚀。网状阳极可对已建成的钢筋混凝土结构中途实施阴极保护，也可对新建钢筋混凝土结构从一开始就实施阴极保护。

The noble metal oxide anode produced by our company is mainly used in the cathodic protection of reinforced concrete bridges, such as coastal facilities, it can provide current protection to the steel structure by low-voltage direct current, thereby inhibiting corrosion of reinforcement. The grid anode can provide cathodic protection on the midway to reinforced concrete structure that has been built, and also can provide the cathodic protection on the new reinforced concrete structure from the beginning.

注：其他规格型号可按客户要求生产。

Note: other specifications can be produced according to customer's request.

钛基贵金属氧化物阳极

贵金属氧化物带状阳极

Precious metal oxide ribbon anode

产品介绍 Product introduction

我公司生产的贵金属氧化物阳极是在钛基材(ASTMB 265一级钛)上覆盖一层具有电催化活性的金属氧化物(钌铱钛等金属的氧化物)而构成，氧化物涂层极化小并且消耗率极低，通过调整氧化物层的成分，可以使该阳极适于不同的环境，如海水、淡水、土壤介质中，带状贵金属氧化物阳极和钛导电片交叉焊接组成阳极网，作为网状阳极阴极保护系统中的辅助阳极在国内外广泛应用新建储罐底板的阴极保护。

贵金属氧化物带状阳极

The noble metal oxide anode produced by our company is covered with a layer of catalytic activity of metal oxides (Ru Ir Ti metal oxide) on the titanium substrate (ASTMB 265 titanium of A grade). Oxide coating polarization is small and the consumption rate is extremely low, by adjusting the oxide layer composition, so that it can be adapted to different environments, such as sea water, fresh water, soil medium, noble metal oxide anode and titanium conductive sheet are cross welded to compose anode network, as the auxiliary anode of network cathodic protection system it is widely applied to the new tank bottom at home and abroad.

Specifications/规格型号	size/尺寸 (宽/wide×厚/thick)	note/备注
MMOD	6.35×0.635	一般152.4米每卷

铜芯柔性(缆型)阳极

Flexible copper anode (cable)

产品介绍 Product introduction

柔性阳极又称聚合物型电缆阳极，聚合物电缆阳极是用导电的、性能稳定的改性聚合物制成的，石墨粉作为导电材料，铜质电缆芯用作电流导线，做成电缆状的阳极柔韧性好，抗机械损伤能力强，化学稳定性好。电缆外经12.7mm，内部铜质芯线的截面积11.4mm²，因此单位长度的电阻R'为2mΩ·m⁻¹。

铜芯柔性(缆型)阳极

柔性阳极主要用于埋地管道和储罐底部的阴极保护，其开发主要是解决①覆盖层老化的旧管道②错综复杂的管网③储罐罐底外壁④长距离、小间距平行的管道⑤高电阻率环境；一般柔性阳极有以下几部分组成：铜芯、导电聚合物阳极材料、焦炭渣、编织物等

Flexible anode is also named polymer type cable anode, cable anode is made of the conductive modified polymer with stable performance, Graphite powder as a conductive material, copper core cable used as a current conductor, anode like cable is made and it has the good flexibility, strong ability against mechanical damage, good chemical stability. Outside diameter of the cable is 12.7mm, cross-sectional area of copper core wire is 11.4mm², so the unit length resistance R' is 2m Ω·m⁻¹. Flexible anode is mainly used for cathodic protection of buried pipeline and the tank bottom, its development is mainly to solve the aging old pipe, the perplexing pipeline, outside wall of tank bottom, the pipe with long distance, small spacing parallel and high resistivity environment; general flexible anode has the following parts: copper conductor, conducting polymer anode materials, coke slag, fabric etc.

盛世达 全国400服务电话：400-688-6761

阴极保护外加电流系列

安装说明 Installation instructions

柔性阳极铺设类似于电缆，先与管道平行挖一条阳极沟，在沟内填上一半焦炭粉，把柔性阳极就为，再覆盖一半焦炭粉，然后用原土（细土，如果是岩石应进行换土）盖实，便可大量回填。

Flexible anode cable laying is similar to the cable, firstly, to dig a anode ditch paralleling with the pipeline, fill half of coke powder in the ditch, then put the anode in it, then covering half of coke powder, and then use the original soil (fine soil, if is the rock should be changing soil) to cover, then can be a lot of backfill.

贵金属氧化物管状阳极 Precious metal oxide tubular anode

产品介绍 Product introduction

我公司生产的贵金属氧化物管状阳极，具有重量轻，导电性能好、性价比高、强耐腐蚀等优点，是目前阴极保护中替代高硅铸铁阳极最有前途的辅助阳极材料。

The noble metal oxide anode tube produced by our company has the advantages of light weight, good electrical conductivity, high ratio of performance to price, anticorrosion etc, it is the most promising auxiliary anode currently in cathodic protection instead of high silicon cast iron anode.

规格型号： Specifications

贵金属氧化物管状阳极

注：阳极尺寸和规格可根据客户要求定制，也可根据提供的施工现场要求材料和环境材料设计制作。

Note: the anode size and specifications can be customized according to customer requirements, It can also make according to the construction site requirement material and environment design.

MMO柔性阳极 Flexible MMO anode

产品介绍

MMO柔性阳极的主体为涂有混合金属氧化物IO2/氧化钽Ta2O5钛基阳极，阳极的工作寿命和额定电流是由阳极主体所定。阳极主体是由一连续的钛基体组成。钛基体上的涂层是能适应高热环境、晶体结构稳定、具有催化性以及良好导电性能的铱/钽金属氧化物混合物，阳极主体的钛金属是遵照ASTM,ASTM B-265,DIN 3.7035标准认证的一级钛。

MMO主阳极必须为钛基，不得采用铜芯材料。也就是说混合金属氧化物必须涂敷在钛基上而不是涂敷在铜芯材料表面。

MMO柔性阳极

The main MMO flexible anode is coated with mixed metal oxides for IO2/ oxidation of tantalum Ta2O5 titanium based anode, anode service life and current ratings are determined by the anode body. The main anode body is composed of a continuous titanium substrate. Coating on titanium substrate is to adapt to the high temperature environment, crystal structure stability, the iridium / tantalum oxide mixture has catalytic and good conductive properties, anode titanium is made of Grade A titanium in accordance with ASTM, ASTM B-265, DIN 3.7035 standard certification.

MMO main anode must be titanium, copper core materials shall not be used. That is to say a mixed metal oxide should be coating on titanium substrate not be coated on the surface of the copper core material.

阳极主体的技术参数如下：

阳极尺寸 (无回填料)	≥0.8mm
阳极重量	0.7Kg/m
阳极设计寿命	25年
阳极在炭回填料中的消耗率	5毫克/安·年
金属氧化物涂层厚度	≥6g/m2
土壤环境下带碳回填料时的最大运行电流密度	<100A/m2
最大电流输出	16mA/尺 (52.5mA/米)
金属氧化物的电阻率 (ohm/cm)	10-5 ohm.cm
阳极与电缆的接触电阻	≤0.9milli-ohms
阳极电阻	≤0.007 ohm.cm

Cathodic protection power supply equipment series products

阴极保护电源设备系列产品

我公司提供的阴极保护电源设备遵循国家规范和国家标准法，适用于埋地钢管管道、储罐外底板、码头钢桩、混凝土内钢筋、场站地下等金属构筑物强制电流阴极保护。产品具有如下技术性能：

适合环境条件

- 环境温度：-15 °C ~ +50 °C；
- 相对湿度：15 % ~ 90 %；
- 大气压力：86KPa ~ 106KPa；
- 交流供电电源：单相220±10% V或三相380±10%；频率：50±5%Hz；
- 直流供电电源：87.5%EdN ~ 117.5%EdN，直流供电电源的电感不大于0.75mH。

交流纹波系数

1 单相AC220V电源供电，恒电位仪工作于额定状态时，其负载纹波系数小于5%。

2 三相AC380V电源供电，恒电位仪工作于额定状态时，其负载纹波系数小于15%。

恒电位控制范围

恒电位控制范围应为0 ~ -3000mv。

输出电压、输出电流范围

1 可控硅恒电位仪输出电压的可调范围不窄于2%UdN(V) ~ 100%UdN (V)，输出电流的可调范围不窄于2%IdN (A) ~ 100%IdN (A)。

2 高频开关恒电位仪电源输出电压的可调范围不窄于1%UdN(V) ~ 100%UdN (V)，输出电流的可调范围不窄于1%IdN (A) ~ 100%IdN (A)。

The cathodic protection of power equipment provided by our company according to the national standard and the national standard method, it is suitable for the impressed current cathodic protection of buried steel pipeline, tank bottom plate, steel pier pile, reinforcement, station underground metal in concrete structures. The product has the following technical performance:

Suitable environmental conditions

Environment temperature: -15 °C ~ +50 °C;
Relative humidity: 15% ~ 90%;
Atmospheric pressure: 86KPa ~ 106KPa;
AC power supply: 220 ± 10% V of single-phase or three-phase of 380 ± 10%; frequency: 50 ± 5%Hz;
DC power supply: 87.5%EdN ~ 117.5%EdN, inductance DC power supply is not more than 0.75mH.

AC ripple coefficient

1 single-phase AC220V power supply, when constant potential instrument work is in rated condition, the load ripple coefficient is less than 5%.

2 three-phase AC380V power supply, constant potential instrument work is in rated condition, the load ripple coefficient is less than 15%.

Constant potential control range

Constant potential control range should be 0 ~ -3000mv.

The output voltage, output current range

1 The output voltage adjustable range of silicon controlled potentiostat is not narrower than 2%UdN (V) ~ 100%UdN (V), the adjustable output current is not narrower than 2%IdN (A) ~ 100%IdN (A).

2 The adjustable range of high frequency switch potentiostat power output voltage is not narrower than 1%UdN (V) ~ 100%UdN (V), the adjustable output current is not narrower than 1%IdN (A) ~ 100%IdN (A).

交流恒电位仪的规格

Communication of the specifications of the potentiostat

电源规格 power source specification	额定输出电压 The rated output voltage	额定输出电流 Rated output current
~220V±10%	30V	15A、30A、50A、75A
或三相380V±10%	40V	100A、150A
50Hz	50V	

直流恒电位仪的规格

The dc of the specifications of the potentiostat

电源规格 (蓄电池标称电压) Power specifications (nominal battery voltage)	额定输出电压 The rated output voltage	额定输出电流 Rated output current
24V±10%	18V、24V、36V	10A
36V±10%	18V、24V、36V、48V	15A
48V±10%	18V、24V、36V、48V、60V	20A

恒电位仪控制精度

≤5mv

The control precision of potentiostat

≤ 5mv

The input impedance of the reference electrode

is more than 1 M Ω (the current passing through the terminal of "reference electrode" is less than 3 μ A)

Operation mode

Manual control: control voltage, output current.
Automatic control: control potential, output current.

运行模式

手动调节：控制电压，输出电流。
自动调节：控制电位，输出电流。

The function of constant potential conversing constant current

For the causes of circuit breaker of the reference electrode, the potentiostat can not operate on constant potential, it should be automatically converted into a constant current mode, the constant current accuracy is ± 2%.

当由于参比电极断路等原因，恒电位仪无法恒电位运行时，应可自动转换成恒电流工作方式，恒电流精度为±2%。

通断电测试

手动控制通断：通过开关选择，仪器进入通12S，断3S间歇供电测试状态。

远控通断：当输入远控通断信号时，系统切断输出电流（系统进入通或断的间歇测试状态）。

The on-off test of the power

The manual on-off control: by being selected by a switch, the instrument will be in the test condition of 12S on, 3S off intermittent power supply.
Remote control switch: when the on-off signal is input, the system will cut off the output current (the system will enter into the test status on or off).

误差报警功能

当保护电位偏离控制电位30 mV ~ 100 mV时，仪器声光报警。

抗干扰能力

抗持续干扰特性：仪器具有抗交流50Hz、30V持续干扰电压。

绝缘电阻

交流电源输入端子、阴(阳)极、零位接阴对机壳的绝缘电阻不小于10MΩ，直流电源输入端子、阴(阳)极、零位接阴对机壳的绝缘电阻不小于10MΩ；

机内电路板、导线焊接点采取喷漆防潮措施。

抗电强度

交流电源输入端子对机壳能承受1500V、50Hz的试验电压，历时1min，不出现飞弧或击穿现象。直流电源输入端子对机壳能承受750V、50Hz的试验电压，历时1min，不出现飞弧或击穿现象。隔离耐压：设备“零位接阴”端子分别与各远传接口的输出端子相互隔离，能承受1500V、50HZ的试验电压，历史1min不出现飞弧或击穿现象。

保护功能

防雷保护
仪器的输入、输出端安装有合适的雷电泄放系统，并符合IEC1024的规定。

当阳极线、管道受到感应雷影响时，阳极、阴极线之间：限幅电压：100-150V，过压通流容量10kA(8/20μS)，漏电流≤20mA；阳极、零位接阴之间：限幅电压：100-150V;过压通流容量10kA(8/20μS);漏电流≤20mA；参比、零位线之间：限幅电压：5V;过压通流容量54A(10/1000μS);漏电流< 0.3μA(3V)。

在仪器输出阳极、阴极端（相对接地端）能承受幅度15kV、脉冲宽度25μs、重复周期1~5S、时间1min的

Error alarm function

When the protection potential is deviated control potential of 30 mV ~ 100 mV, the instrument will be on acousto-optic alarm.

Anti interference ability

Anti interference characteristics: the instrument is with the performance of anti AC 50Hz, 30V continuous interference voltage.

Insulation resistance

The AC power input terminal, cathode and anode, the insulation resistance of zero pole connected cathode on casing is no less than 10M, DC power input terminals, cathode and anode, zero pole connected cathode on the casing insulation resistance is no less than 10M;
The machine circuit board, wire welding point are taken the painting measures.

Dielectric strength

The AC power input terminal on the casing can withstand the test voltage of 1500V, 50Hz, duration 1min, there is no flashover or breakdown phenomenon. The DC power input terminals on the casing can withstand test voltage of 750V, 50Hz, during 1min, there is no flashover or breakdown phenomenon. Isolation voltage: equipment "zero ground cathode" terminals are respectively and the output terminal of the remote interface of mutual isolation test voltage, it can bear 1500V, 50HZ, during 1min history, there is no flashover or breakdown phenomenon.

Protection function

Lightning protection
A suitable lightning discharge system is installed on the input, output end of the instrument, and complies with the provisions of IEC1024.

When the anode wire and pipe is effected by induced lightning, between the anode and cathode line: limiting voltage: 100-150V, the flow capacity of overvoltage is 10kA (8/20 μ S), leakage current ≤ 20mA; anodic, cathodic protection station. Limiting voltage: 100-150V; the flow capacity of overvoltage is 10kA (8/20 μ S); leakage current ≤ 20mA; between the reference, zero line: limiting voltage: 5V; the flow capacity of overvoltage is 54A (10/1000 μ S); leakage current < 0.3 μ A (3V)

In the instrument output anode, cathode (relative to the grounding end) it can withstand the amplitude of 15kV, pulse width of 25 μ s, repeat the cycle time 1 ~ 5S, 1min of simulation of induction thunder.

模拟感应雷的冲击。

过流保护

仪器的交流输入端和直流输出端装有快速熔断器。
当仪器输出电流达到额定值的102%~110%时，延时20s后仪器自动切断输出电流或进入原设定的恒电流值并声光报警。

故障保护

对多路输出设备，当其中一路在工作中出现故障，红色指示灯亮，仪器将自动停止该路输出，并发出报警鸣音，持续2分钟后可自动关机。

数据传输

当仪器需实现远程测控时，提供以下接口。
1 点对点接口：模拟量输入、输出接口为4mA ~ 20mA的标准工业信号。开关量输入、输出接口为电平信号。高电平信号的电压值应在20V ~ 24V之间，低电平信号的电压值应在0V ~ 4V之间。

1.1 输出电压在0 ~ UdN 范围内变化，在“电压信号输出”端口上应变换为4mA ~ 20mA 的标准工业信号，变换误差不大于1%。

1.2 输出电流在0 ~ IdN 范围内变化，在“电流信号输出”端口上变换为4mA ~ 20mA 的标准工业信号，变换误差不大于1%。

1.3 保护电位在0mV ~ - UeN 范围内变化，在“电位信号输出”端口上变换为4mA ~ 20mA的电流信号，变换误差不大于1%。

1.4 从“远控给定信号”端口输入4mA ~ 20mA的标准工业信号时，仪器可变换为0 ~ - UeN的控制电位信号，变换误差不大于0.5%。

1.5 远控开、关机信号为脉宽为1s 的高电平(DC24V)脉冲信号。

1.6 运行信号为触点信号，仪器工作时，触点导通，反之则断开。

1.7 远控输出通断功能：当“远控通断信号”端口的电

Over current protection

The AC input and DC output end of the instrument is provided with a quick fuse.
When the output current of the instrument reaches 102%~110% of the rated value, after delaying 20s instrument cut output current will automatically enter into the setted constant current value and alarm.

Fault protection

On the multiple output devices, when one line is in failure, the red indicator light is on, the instrument will automatically stop the output, and send out alarm sound, sustained after 2 minutes it will automatically shutdown.

Data transmission

When the instrument is required to realize the remote monitoring and control, the following interface will be provided.

1. Point-to-point interface: analog input, output interface for the standard signal of 4mA ~ 20mA. Switch input, output interface is level signal. High voltage level signal value should be 20V ~ 24V, voltage and low level signal value should be between 0V to 4V.

1.1 The change of output voltage is in the range of 0 ~ UdN, in the end of "voltage signal output", it should be transformed into the standard signal of 4mA ~ 20mA, transform error is less than 1%.

1.2 The output current changes is in the range of 0 ~ IdN, in the end of "current signal output", it is transformed into the standard signal of 4mA ~ 20mA, transform error is less than 1%.

1.3 The protection potential changes is in the range of 0mV ~ UeN , in the end of "potential output", it is transformed into a current signal of 4mA ~ 20mA, transform error is less than 1%.

1.4 When industry standard signal from 4mA to 20mA is inputted from "the remote given signal input", the instrument can be transformed into control potential signal of 0 ~ UeN, transform error is less than 0.5%.

1.5 The signal of remote control to open, shutdown is the pulse signal with pulse width of 1s for the high level of (DC24V).

1.6 The operation signal is the contact signal, when the instrument is operating, conduction will be contacted, otherwise it will be disconnected.

1.7 Remote control on-off function: when the voltage signal of "remote control on-off signal end" is switching from low level to high, the instrument should be cut off the output current or enter the on-off state. When the voltage signal of "remote control on-off signal end" is switching from high level to low level, the instrument will resume the output current or enter the normal working state.

压信号由低电平转换为高电平，仪器应切断输出电流或进入通断工作状态。当“远控通断信号”端口的电压信号由高电平转换为低电平，仪器恢复输出电流或进入正常工作状态。

2 RS485接口：采用ModBus或自定义的通讯协议，可实现数据的远传、远程开关机、远控通断等功能。

冷却方式

空冷型：自然通风、强制对流。

油冷型：应符合GB2536的规定。

测量、指示

设备具有显示输出电压、输出电流、保护电位、电源电压等参数，测量精度1.5级，同时采用指示灯显示各个工作状态。可监测交流电源的输入电压，可测量、记录运行仪器的电能消耗。

机壳及涂镀

机壳采用厚度大于1.5 mm的冷轧钢板成形，表面采用静电喷塑防腐处理，机壳防护等级：户外IP55以上，户内IP31以上。

2. RS485 interface: ModBus or custom communication protocol, can realize the functions of remote transmission, remote switching machine, remote control on-off.

Cooling mode

Air cooling type: natural ventilation, forced convection.

Oil cooling type: it shall conform to the provisions of Gb2536.

Measurement, indicator

Device has the parameters of display output voltage, output current, protection potential, the power supply voltage and others, the measurement accuracy is 1.5, at the same time the indicator can display each state. It can monitor the input voltage of AC power supply, can measure, record operation energy consumption of the instrument.

The shell and coating

The casing is made of cold rolled steel plate of thickness greater than 1.5 mm, the surface is used of anti-corrosion treatment of electrostatic spray, shell protection grade: IP55 of outdoor, indoor of IP31 above.

**概述**

测试桩设计为多功能测试桩,用于阴极保护参数的检测,是管道管理维护中必不可少的装置,按测试功能沿线布设。测试桩用于管道电位、电流、绝缘性能的检测,本装置装有6个接线柱,可以根据设计单位的具体要求方便地组成电位、电流、牺牲阳极、绝缘性能测试桩或交叉管道测试桩等。

测试桩由桩体、测试接线板、测试导线和铭牌等几部分组成。

测试桩的分类:

1. 按材质分:钢质测试桩、水泥测试桩、钢质测试桩又分为碳钢测试桩和不锈钢测试桩。
2. 按功能分:
 - 电位测试桩:主要用于检测保护电位
 - 牺牲阳极测试桩:用于连接牺牲阳极,测量牺牲阳极的性能参数
 - 电流测试桩:测量管中电流
 - 保护效果测试桩:连接测试片。

常用测试桩型号规格

The types and specifications of common testing pile

Model/型号	Specifications/规格 长×直径×壁厚 (长×宽×高) (length x width x height)	Material/材质
CS-1	3000×Φ108×4	碳钢
CS-2	1800×Φ89×3	碳钢
CS-3	1200×120×120	不锈钢
CS-4	1600×120×120	水泥
CS-5	1800×Φ89×4	玻璃钢

**Summary**

Test pile design for multifunction testing pile, it is used for the detection of cathodic protection parameters, and it is a device for pipeline maintenance in indispensable, according to test functional layout along the line. Test pile for the detection of pipeline potential, current, insulation performance, the device is equipped with 6 terminals, it can easily compose of potential, current, sacrificial anode, insulation performance test pile or cross pipe testing pile, etc.

The test pile is composed by several parts of a pile body, test board, test leads and nameplate.

Classification of the test pile:

1. According to the material: can be classified as steel test piles, test piles of cement. Steel test piles are divided into carbon steel test piles and stainless steel test piles.

2. According to the function:

- potential test pile: it is mainly used to detect the protection potential

- sacrificial anode test pile: it is used to connect the sacrificial anode, performance parameter measurement of sacrificial anodes

The current test pile: measuring tube current

The protective effect of pile testing: connection test piece.

The sacrificial anode anticorrosion engineering of Jinzhou harbor No.3 harbor berth 30IB pipe pile May,2011
The anticorrosion engineering of section 1 steel pipe pile of Caofeidian ore dock July,2011
The anti-corrosion engineering of phase 1 steel pipe pile of Tianjin Port North port container terminal August, 2011
The anti-corrosion engineering of 303# berth steel pipe pile of Yingkou port group August, 2011
The anticorrosion engineering of Steel pipe pile of Baoshan Iron and Steel Group Majishan Port April,2011

管网储罐

武汉钢铁有限公司三炼钢10万立方米煤气柜防腐工程 2010年07月
莱州——昌邑输油管道工程阴极保护项目 2010年06月
长兴岛输水管道二期工程阴极保护项目 2010年09月
唐山市煤气管道工程阴极保护项目 2010年11月
中缅原油管道工程（缅甸段）马德首站原油罐区工程100000M3储罐防腐（国外部分工程）2013年02月
焦作市焦煤集团供热保温管道防腐保温工程 2011年05月

中缅原油管道工程（缅甸段）马德首站原油罐区工程-抛丸除锈及刷底漆工程（国内部分）2011年11月
内蒙古西部天然气管道长呼复线工程阴极保护项目 2012年04月
福建LNG天然气公司输气管道阴极保护工程 2012年07月
安阳钢铁集团冷轧厂煤气管道工程阴极保护项目 2012年10月
山东省天然气管道济南——青岛管线阳极保护工程 2012年10月
山西长治市城区南一环燃气管道工程阴极保护项目 2012年11月
德州市城镇电站接地网改造工程阴极保护项目 2012年11月
福建泉州青兰山油库输油管道工程阴极保护项目 2012年12月

Network storage tank

The 100,000 cubic meters gas tank anti-corrosion engineering of Wuhan Iron and Steel Co. No.3 Steel Plant July,2010
The cathodic protection project of Laizhou -- Changyi oil pipeline June,2010
The phase 2 project cathodic protection engineering of Changxing Island water pipeline September,2010
The cathodic protection project of Tangshan City gas pipeline November,2010
the original tank area engineering 100,000M3 storage tank anticorrosion of the first station of Ma De of China-Myanmar oil pipeline project (Burma section) (part of foreign engineering) February,2013
The anti-corrosion insulation engineering of Jiaozuo coking coal group heating pipeline May,2011
The shot blasting cleaning and brush primer engineering of the first station of Ma De of China-Myanmar oil pipeline project (Burma section) (part of domestic engineering) November,2011
The cathodic protection project of West Inner Mongolia natural gas pipeline Chang-Hu line engineering April,2012
The cathodic protection of Fujian LNG natural gas company pipeline July,2012
The gas pipeline cathodic protection project of Anyang Iron and Steel Group cold rolling plant October,2012
Ji'nan-Qingdao pipeline cathodic protection project of Natural gas pipeline in Shandong Province October,2012
The gas pipeline cathodic protection project of Shanxi Changzhi city No.1 south ring road November,2012
The cathodic protection project of Dezhou city station grounding grid renovation project November,2012
Fujian Quanzhou Qing Lanshan oil pipeline cathodic protection project December,2012

港工设施

湛江港保满集装箱码头一期钢管桩阴极保护工程 2012年11月
安哥拉原油码头工程 2012年06月
曹妃甸原油码头钢管桩牺牲阳极防腐工程 2012年7月
天津港临港工业港区粮油码头钢管桩防腐工程 2012年7月
曹妃甸矿石码头二期钢管桩防腐工程 2013年7月
鲅鱼圈30万吨矿石码头钢桩阴极保护工程 2013年9月
天津港南疆专业化矿石码头钢管桩防腐工程 2013年02月
珠海港万山港区桂山油库码头多点系泊码头技术改造工程 2013年4月
海南洋浦海事基地码头钢板桩牺牲阳极保护工程 2013年06月

电力化工

大连自来水公司引水管道工程阴极保护项目 2011年08月
江苏望亭电厂框架防腐保温工程 2011年09月
陕西靖边县输油管道工程阴极保护项目 2011年10月
宝鸡石头河水库引水管道工程阴极保护项目 2012年03月
驻马店中原燃气电厂防腐保温工程 2012年08月

Port facilities

The cathodic protection project of phase 1 steel pipe pile of Zhanjiang port Baoman container terminal November, 2012
Angola crude oil terminal project June,2012
The steel pipe pile sacrificial anode anticorrosion engineering of Caofeidian crude oil terminal July,2012
The steel pipe pile anticorrosion engineering of Tianjin Port Lingang Industrial Zone July, 2012
The phase 2 steel pipe pile anti-corrosion project of Caofeidian ore terminal July,2013
The steel pile cathodic protection project of Bayuquan 300,000 tons of ore terminal September,2013
The steel pipe pile anti-corrosion engineering of Tianjin Port Nanjiang Specialized Ore Terminal February,2013
The technical transformation project of Zhuhai port Guishan oil depot wharf multi point mooring terminal April,2013
The sheet pile sacrificial anode protection project of Hainan Yangpu maritime terminal base June,2013

Power chemical industry

The diversion penstock pipeline cathode protection engineering of Dalian water works August,2011
The frame anti-corrosion insulation engineering of Jiangsu Wangting power plant September,2011
The cathodic protection project of Shaanxi Jingbian oil pipeline October,2011
The cathodic protection project of Baoji Shitouhe reservoir water diversion pipeline March, 2012
The corrosion insulation engineering of Zhumadian Zhongyuan gas plant August,2012
